

Bottle Packing Guide

Believe it or not, unpacking and packing bottles is one of the most time consuming parts of the print process and we ask our customers sending us bottles to be mindful of excess packaging.

For printing we require the bottles to be unpackaged and the lids removed. They are secured in a tool at both ends within the machine for printing...

If we feel that packaging is excessive we may add on a handling fee. To avoid additional charges, please see our packing recommendations below.

Minimising packaging - saves time, money and the environment!

BOTTLE LABELS OR SLEEVES:

Paper sleeves or plastic labels need to be removed prior to printing. This adds on significant pre-preparation time as well as the possibility to need to remove any glue residue from the label/sleeve.

And please be aware that once printed we will not adhere any label or sleeve back to the bottle.

BOX IN A BOX IN A BOX:

Multiple boxes adds on minutes to unpacking time.

For a few bottles, this might not be an issue - but imagine having to do this for 1000 bottles!

We recommend one large box which houses just individually boxed bottles inside. We will repackage each bottle into its packaging after the print has cured.

PLASTIC OR PAPER PACKING:

Additional 'protective packing' such as a plastic bag or paper wrap will be disposed of when unboxed.

These will not be re applied or included in the re-packing of bottles. We recommend leaving them out entirely where possible.

LABEL YOUR BOXES:

When receiving multiple bottles from multiple locations and clients - we need to know what they are and who they are from. Label your deliveries clearly on each box to avoid confusion.

PLEASE INCLUDE:

Company name
Job reference
Number of bottles
Bottle spec
Number of boxes
Box number
(1of8, 2of8 etc)
